Let's turn the cloud into a knowledge creating network

O.S.O.E is a real partnership between your university and TioLive to create a new way of teaching the scientific business management.

An Educational Partnership

Improve education about scientific management

We believe that a significant gap exist between how management science is thought and the reality which is going on in each company. By using an IT system used by large companies as a support of the teaching lessons, we hope to innovate in the way management is thought, to captivate each students and to prepare them even better for the harsh competition of globalized economy.

Lessons are created with your teachers

As professionals we have many ideas about what should be taught to the students, but we need the help of the teachers of each university to write good lessons. This is why the educational materials released under the project have all been created with the help of the teachers participating into the project.

OSOE is made of many different pedagogies

Each new lecture is an opportunity to adapt or create materials according to the pedagogy of each professor or university. We believe that there is many different good ways to teach. This is why the OSOE project will never try to replace teachers perceptiveness and their abilities to adapt to each students or classes.

TioLive

As the French 'Sesamath' initiative, we believe in shared knowledge and collaboration between universities

A Complete Course Material Library

Shared knowledge means accurate knowledge

Because we share our knowledge, everyone is free to contribute and to improve this knowledge. It means less time spend on "reinventing the wheel" and more time spend on research and knowledge creation. We think that the more we are, the more accurate will be the educational materials.

Shared Knowledge means complete knowledge

1000 pages of teaching materials have already been released and this is just the beginning. More materials will come so we can cover all fields which are taught into universities.

Shared Knowledge means free knowledge

We want to share our knowledge as much as we can. The creative common license of the materials allow everyone to use the materials for free to learn by him/herself.

Getting recognition with shared knowledge

Shared knowledge doesn't mean that you won't get any recognition for your work. In fact it will be the contrary. The creative commons license used require everyone which use your work to attribute the work to the author. So by helping in the creation of materials is also good for communication and recognition of your teachers and your university.

TioLive

O.S.O.E is a good opportunity to bring your university closer to the professionals on the field. Moreover your students will benefit from real business cases.

A Concrete Interaction with Local SMEs

Make your students work on real cases

We already met small and medium size businesses which are willing to participate in the project. Companies can provide students with real business cases. It is essential for us that students work on real world case studies.

Help local businesses

While they give you real life business cases, the result of the work made by the students can help local businesses. Those results can also be shared, if the company agree, so the entire community can benefit from it.

Bring your research closer to local businesses

By getting closer to the local businesses within the OSOE project, you can share the result of the current academic researches with managers. Moreover, you can find new research partners thanks to the program.

TioLive

TioLive platform is a cost efficient solution to create ERP5 instances available through any web browser. There is no need to install anything on the computers.

Easy to install, Easy to maintain

On site or on-line installation

You can buy the entire platform so you will be able to manage it yourself on your servers and through your own website. The platform can be installed on your servers within few hours by our team. You can also choose to use the existing on-line platform, so you can benefit from the OSOE project even without managing the platform at all.

ERP5 instances delivered through the cloud

Thanks to TioLive's technologies, You can deliver an ERP5 instance to each one of your students. You don't have to install anything on their computer. ERP5 is one of the most advanced open-source ERP and is used by large companies as much as smaller one.

No Lock-in, only freedom

Today cloud computing market is lead by a complete lock-in of customer data. By teaching on open-source software, you make sure that your students are free to leave the platform with all their data and to reuse them on their own.
