Hi the reason is that you only can take screenshot of your real computer. So first, get out of vitural machine by " Ctrl + Alt " and then use print key to take screen shot

I'm having a problem with taking screenshots when using the virtual machine. The normal key combination (FN+Print) doesnt work there. Also Alt+ FN+Print doesnt work. I guess the FN key doesnt work under the virtual machine.

Is there any way to change the shortcuts or to take screenshots without using the keyboard?

Thanks in advance

You can download Snipping Tool on your machine in order to take screenshots.

Thanks to both of you! It works.
