

From: Unknown User

Hi. I got new information.

I am sorry but latest version of ERP5 is currently not building.

Our build test of ERP5 into a Debian Stretch OS is currently failing :

You can track all our tests on this page:

[https://stack.nexedi.com/test\\_status?fbclid=IwAR0tnOIWOPn3ksRLnQES06zBe5yYNBffK3c8FwB502BGn2VG1yFZr\\_5nCdw](https://stack.nexedi.com/test_status?fbclid=IwAR0tnOIWOPn3ksRLnQES06zBe5yYNBffK3c8FwB502BGn2VG1yFZr_5nCdw)

We are now fixing the build test of ERP5 on Debian. Until it is fixed, ERP5 will not build.

Ok, I've got it, thanks for the info! It seems we will move to another erp system.

1. Any estimate as to when ERP5 build will be functional again?
  2. Will this functionality only be for Debian 9 (Stretch), or will it also include Debian 10 (Buster)?
  3. What seems to be the root cause of these failures and are these failures equivalent in both Debian 9 and 10 (according to the logs, script output, file presence, and computer behavior from our own testing, it seems to be the \*.ymls in the playbook)?
- I can possibly help fix the build, more specifically, the Debian 10 build, since we are attempting to run ERP5 on a brand new server Running Debian 10.2.0, however I will need to know where to start looking if I do so. I will keep an eye out on this forum post for responses. All the best!
