

Why can I not see the objects that I have created?

Sometimes you may find yourself not be able to see the objects you have already created(e.g. persons, accounting transactions etc.). If this happens, please first check the user account you used to login. The user account you used may not have the permission to view all objects. Secondly, this may happen because of filters were set up. You can reset the filter to None by clicking on the "show all"button . Please refer to the tutorial [How to reset filter](#) to view more regarding how to reset filter.
