

Start developing HTML5 application with VIFIB PaaS: the WebRunner

This guide will teach you:

- How to order a webrunner
- How to access your webrunner
- How to set up your environment
- How to start developing

Order a Webrunner

Go on www.vifib.com in order to order a webrunner

▫
▶ Details

Access Web Runner

Read your connection parameters

▫
Here are displayed all the information needed to access webrunner' services

1. Access url: Url to set up your account and then login into your webrunner
2. Backend URL: ipv6 url to directly access your runner
3. Git private url: private url for your repositories. You can use it to push
4. Git public url: public url of your repositories.
5. Monitor password: default monitor password generated for the webrunner instance
6. Monitor Url: Monitor OPML URL that should be used to connect or configure this monitor instance to web interface.
7. Monitor default Username.
8. Monitor Setup Url: Use this url to configure or reconfigure your monitor instance in your web browser.
9. Public Url: Url of the public folder of your runner
10. SSH command: used to access your runner in ssh when you provided a ssh public key
11. Resilient takeover URL and password.
12. Url: Url to access your runner once you set your account
13. Webdav url: url for webdav access of your runner it access the root of your runner. Same users as the one for the runner

Connect to monitor interface

In order to set up the first account of your web runner you need to get the **recovery code** available in the monitor interface. To do so use the "Monitor Setup Url" available as a connection parameter. Use "Monitor Username" and "Monitor Password" to configure.

▫

Get your credential

Once in your monitoring interface click on "Menu" -> "Applications Overview" then navigate to your instance, in order to get the "recovery-code" needed to set your account into the webrunner. Note that Webrunner webdav password is the same as monitor password. You can change it from monitoring interface.

▫

Set Up your account

Now that you have the recovery password access the "Access Url" in order to set up your account into the runner. You should access the following

▫
