

# Web Runner Folder Hierarchy (relevant for Web Runner usage)

From the instance root

- `srv/`
  - `runner/` # Root folder for development inside the runner. It is accessible in WebDav.
    - `software/` # contains software build in the web runner.
    - `instance/` # contains instances deployed (or being deployed).
    - `public/` # public directory accessible by the public url.
    - `project/` # contains projects repositories. They are accessible via the git-public and git-private urls.
    - `softwareLink/` # Symlinks to built softwares.
    - `instance.log` # log of the last instance run.
    - `software.log` # log of the last software build.
- `etc/`
  - `ssh/` # starting folder when connecting in ssh.
