

## Configure a SSH access to your WebRunner Slappartition.

In this tutorial is explained how to connect to your WebRunner using SSH.

It will allow you to directly manipulate files and directories from a console, but also transfer files between your remote WebRunner and your local computer.

An IPv6 access is necessary in order to connect to your WebRunner

You first need to go to your instance web page, on [slapos.org](https://slapos.org) . Then, please provide your public ssh key in the parameters XML, such like that :

□

After a while, you will be able to connect to your webrunner using the "ssh\_command" in the published parameters (number 2) :

□
