

How can I have IPv6 connection?

by [SlapOS Team](#).

▼ Details

This article is intended for those who do not have native IPv6 or not reliable IPv6. We will explain how to use an IPv6 tunnel.

As a general convention, all the commands on this article requires to be run as super user.

IPv6

Grandenet (Re6stnet)

In order to have IPv6 anywhere, you can subscribe to Grandenet and get it:

<http://www.grandenet.cn/en/documentation/user>

Testing your IPv6 Connection

The simplest way to test if your IPv6 Connection is working, is ping to ipv6.google.com (if ping is not blocked):

```
ping6 ipv6.google.com
```

```
ping6 www.kame.net
```

Other alternative is use traceroute6:

```
traceroute6 ipv6.google.com
```

```
traceroute6 www.kame.net
```
