**Nexedi successfully completed certification of ITRenew Sesame OCP Leopard recertified servers for SlapOS operation management system powered by Ubuntu 16.04 Linux. Any company can now build their own public or private cloud infrastructure based on a fully open-source, license-free solution with 100% success track record.**

Thomas Gambier, Head of Rapid.Space cloud operations at Nexedi, stated: "ITRenew Sesame OCP Leopard recertified servers were installed with Ubuntu 16.04 and SlapOS. They have gone through a one month period of intensive tests which combine CPU, RAM, SSD and networking at the same time by running 48 ERP instances on a 48-core server. All test results were successful."

Erik Riedel, SVP Sesame Engineering at ITRenew, stated "SlapOS powered by Ubuntu adds a fully open-source, license-free option for companies looking to create their own public cloud or private cloud infrastructure based on recertified Sesame OCP Leopard servers, enabling disruptive TCO driven by both hardware and software parts of the solution."

Jean-Paul Smets, CEO of Nexedi, concludes: "SlapOS is the only open-source IaaS or PaaS solution with 100% success ratio. Combining SlapOS and ITRenew Sesame OCP Leopard can slash costs by 5 to 20 compared to average public clouds."
