

# ERP5 Site initial setup

by [OSOE Project](#).

▼ Details

This guide will teach you how to handle promises and check site consistency

## Access your ERP5 and log in

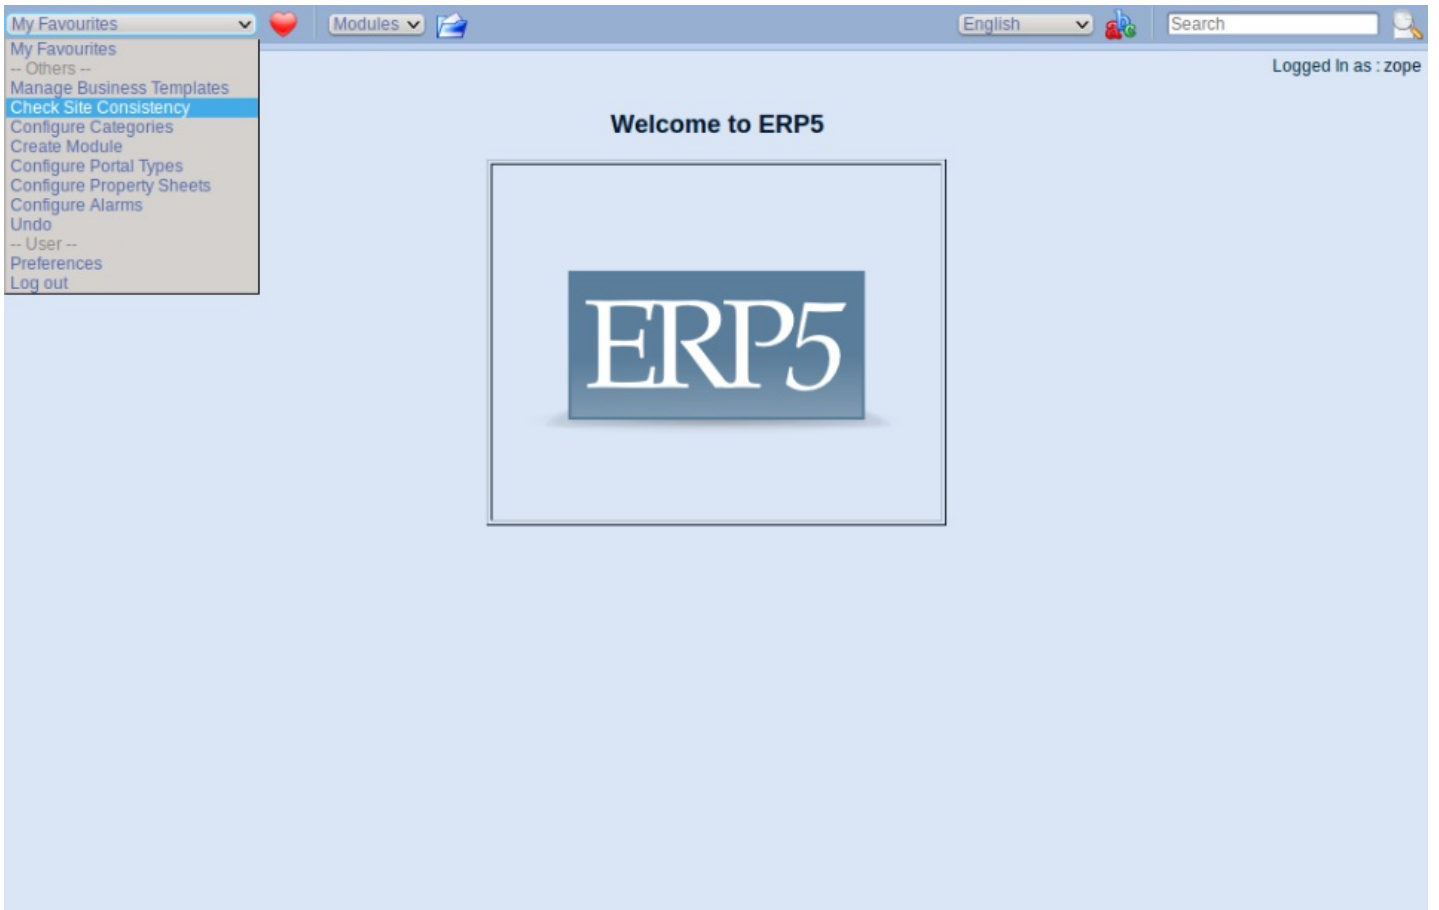

The screenshot shows a web browser window with the ERP5 login page. The browser's address bar shows 'ERP5 /'. The page has a light blue background. At the top, there are navigation elements: 'My Favourites' with a heart icon, 'Modules' with a folder icon, a language dropdown set to 'English', and a search bar. The main content area is titled 'Log in'. It contains a form with the following fields: 'Name' with the value 'zope', 'Password' (empty), and 'Remember my name' (unchecked). Below the form is a 'Login' button and a link 'I forgot my password!'. To the right of the form, there is a help section with the following text: 'Having trouble logging in? Make sure to enable cookies in your web browser. Do not forget to logout or exit your browser when you are done. Setting the 'Remember my name' option will set a cookie with your username, so that when you login next time, your user name will already be filled in for you.'

▼ Details

Access your ERP5 instance by using the "login" and password provided by SlapOS.

## Check Site Consistency

#### ▼ Details

In "My Favourites" menu, select "Check Site Consistency".

## Fix inconsistencies

ERP5 /

Do you want to enable Periodical Check?

Site Configuration Problems : 1 - 3 of 3 records - 0 items selected

	Title	Configuration Status
<input checked="" type="checkbox"/>	Detect bit5 update	Upgrade needed (Needed to install erp5_configurator_run_my_doc, erp5_configurator_ung, erp5_configurator, erp5_configurator_maxma_demo, erp5_configurator_standard, erp5_full_text_myisam_catalog, erp5_base, erp5_core_proxy_field_legacy, erp5_workflow)
<input checked="" type="checkbox"/>	Configure Memcached	Memcached not configured as expected (Expect memcached://10.0.10.252:11000/ Got memcached://127.0.0.1:11211/)
<input checked="" type="checkbox"/>	Check Conversion Server Configuration	Conversion Server not configured as expected (Expect cloudooo://10.0.93.217:23000/ Got cloudooo://None:None/)

Force Reload Promises Fix Site Configuration

#### ▼ Details

Solve site inconsistencies by selecting all and clicking on "Fix Site Configuration".

## Wait for activites runs

ERP5 / Logged In as : zope

Site Configuration is going to be fixed by Activities.

### Welcome to ERP5

- Business Configurations
- Currencies
- Notification Messages
- Organisations
- Persons
- Queries
- Workflows

### ▼ Details

It can take few minutes, but some modules should be showed on front page. Otherwise you can repeat the process by going to "Check Site Consistency"

After this initial setup you can now start to develop on your instance and/or use configurator for configuring your ERP5 for the end user.
